

## 4500 Count/Minute Bikerider: Workout & Training Breakdown

## **Bikerider 4500 Count or Minute**

• While "4500 count or minute" is not a standard cycling metric, community bike share data demonstrate users logging up to **4500 miles or minutes** over a set period, with per-trip averages often between 15 and 30 minutes of continuous biking. Some programs in urban environments track total rides and minutes, offering a target for high-volume cyclist activity<sup>[1]</sup>.

# Superset: Alternating Between Abs & Back

Supersetting abs and back involves alternating exercises with little to no rest, maximizing efficiency and intensity<sup>[2]</sup>. Below is a structured summary of your specified routine:

#### **AB Exercises**

Exercise	Sets x Reps	Load
Weighted Crunch	8 x 8	100 lb
Hanging Knee Raise	8 x 8	50 lb
Kneeling Cable Crunch	8 x 8	171 lb
Vertical-ben. Leg Raise	8 x 8	150 lb

- **Weighted Crunch:** Inspired by Vince Gironda's 8x8 protocol for muscle hypertrophy, typically performed with significant weight and controlled movement<sup>[3]</sup>
- **Hanging Knee Raise:** A core developer targeting lower abs; perform with controlled motion, avoiding excessive swinging for anti-momentum benefits<sup>[5][6]</sup>.
- **Kneeling Cable Crunch:** Focus on core engagement, not arm pull, and keep the movement strict for maximum ab activation<sup>[7][8]</sup>.
- **Vertical Bench/Leg Raise:** Common in advanced routines for lower abs, executed on a bench or using parallel bars for increased intensity<sup>[9]</sup>.

## **BACK & Cross Training / CrossFit**

Exercise	Sets x Reps	Load
Close-Grip Pulldown	2 x 32	200 lb
Seated Cable Rope Row	2 x 32	250 lb
Dumbbell Row	2 x 32	342 lb
Behind-the-Neck Pulldown	2 x 32	115 lb

- **Close-Grip Pulldown:** Targets lats and middle back, emphasizing controlled elbow movement and shoulder positioning<sup>[10][11]</sup>.
- **Seated Cable Rope Row:** Focuses on entire back thickness; pull handle to lower stomach for max muscle recruitment, back straight<sup>[12]</sup>.
- **Dumbbell Row & Behind-the-Neck Pulldown:** High reps and weight, emphasizing muscular endurance and hypertrophy in the upper and mid-back<sup>[13]</sup>.

# **Cross-Functional, Potency, & Explosive Movements**

Exercise	Sets x Reps	Load
Reverse Lift	3 x 3	500 lb
Push Jerk	3 x 3	250 lb
Dolphin Abs	-	875 rep*
Neck Abs	-	125 rep*

<sup>\*</sup>High rep ab drills like "Dolphin abs" and "Neck abs" likely reference endurance-focused, high-volume core work.

#### **Notes on Protocol**

- **Superset Workouts:** Alternating abs and back allows you to maintain high intensity with less local fatigue and time efficiency<sup>[2][14]</sup>.
- **8x8 Method:** Designed for muscle hypertrophy, prioritizing muscular endurance and metabolic stress<sup>[3][4]</sup>.

• **Mobility & Dynamic Training:** Integration of power moves (push jerk, reverse lift) with mobility work increases neuromuscular recruitment and athletic performance.

### **Guidance & Considerations**

- Monitor loads and form: Many listed weights are advanced. Ensure proper warm-up and progression to avoid risk of injury.
- Balance high volume: With high total reps and heavy loads, ensure adequate rest and nutrition.
- *Functional integration*: The mix of seated rows, pulldowns, weighted crunches, and explosive lifts forms a comprehensive athlete-centric program.

For further exercise instructions, in-depth form videos, and professional programming structure, consult certified fitness professionals and reference exercise demo sources as a guide<sup>[5][7][6][8][1][12]</sup>.
